SAVE THIS

You're prompting AI like it's Google.

5 habits that turn generic answers into work you can actually use.

Kaarya AI

THE PROBLEM

Google rewards keywords. AI rewards context.

Type “best marketing strategy” and you get a textbook essay. The model isn't bad. It just knows nothing about you, your goal or your audience.

Kaarya AI

01

Give it a role and an audience

× INSTEAD OF

“Write a LinkedIn post about AI.”

✓ TRY

“You're a career coach. Write a LinkedIn post for final-year engineering students on using AI in internship applications.”

Kaarya AI

02

Paste the context in

× INSTEAD OF

“Summarise my project.”

✓ TRY

“Here's my project README and the job description. Summarise the project in 3 lines that match what this role asks for.”

Kaarya AI

03

Show one example of good

“Engaging” and “professional” mean different things to everyone. Paste one post, email or answer you like and say: match this tone and length.

Kaarya AI

04

Let it ask you questions first

× INSTEAD OF

“Make me a study plan for my exams.”

✓ TRY

“Before you make my study plan, ask me 5 questions you need answered to make it realistic.”

Kaarya AI

05

Edit the draft. Don’t start over.

Treat the first answer as draft one. Reply with: “shorter”, “make it specific to Indian students”, “turn this into a table”. Three rounds beats one perfect prompt.

Kaarya AI

CHEAT SHEET

Before you hit enter, check:

1. Role and audience
2. Context pasted in
3. One example of good
4. Questions first
5. Iterate, don't restart
